B2
TRAIN-matched empirical RNA null
D1
MRes curated-aptamer diffusion-adapted RNAGenesis
B1
generic released RNAGenesis
B0
released aptamer-adapted RNAGenesis
Can random RNA matched to corpus composition reach aptamer-like characteristics?
Does small-data adaptation shift generation toward held-out aptamer characteristics?
Does a general RNA prior alone generate aptamer-like sequences?
Does aptamer adaptation on separate data transfer to our held-out aptamers?
